

Minimal Quantity Lubrication Systems...

...the future of cooling lubrication technology

Complete with all accessories and ready to use.

Including 2 litres of the market's finest quality cutting oil, 3.5 metre hose, coil, 2 metre electric cable, forked nozzle for band saw, 6 millimetre pneumatic connection device, screws, etc.

Please feel free to contact us if you need any additional nozzles for other fields of application.

Our minimal quantity cooling lubrication systems are specially designed for use in metalworking, where the requirements for process reliability and quality are very high.

The lubrication system enables an exact consumption of cutting oil, thereby securing a clean and dry surface of blanks and swarfs after processing, whilst delivering minimal quantities of lubricant to the work tool and the workpiece.

The combination of the dosing mechanism and our special cutting oil significantly extends the (omit useful) life of cutting tools and machines by up to 30%. The products are typically used in cutting processes such as sawing, drilling and punching.

The systems come complete with all accessories and English assembly instructions (step-by-step-guide) which makes the assembly incredibly simple. A hotline service is available on all weekdays between 7am and 6pm.

We recommend our Meta Lube K Oil:

Meta Lube K, is a special vegetable oil for hard metal processing. This product is suitable for band saws, lathes, cutters, grinding machines etc. Meta Lube K Oil protects blanks and tools against rust.

Colour: Green

Storage: Indoors

Application: Is applied automatically by the mechanism

Transport: The product is unclassified

Labelling: No obligation to label the product

Volume: 10 litres

All prices are exclusive of VAT and delivery charges
